

# The ConX System for Industrial Applications

ConX® is a chassis based modular structural steel system ideal for pipe rack and processing or equipment units, as well as high-density residential, commercial, healthcare and other structures.

For over a decade, ConXtech has teamed with high profile clients to design and deliver innovative structures that improve safety and accelerate schedules while reducing Total Installed Costs (TIC).

## STANDARDIZED, LOWER & LOCKING™ MOMENT CONNECTORS

ConX connections are factory welded onto standard columns and beams.

## BENEFITS OF CONX COMPARED TO CONVENTIONAL DELIVERY

- **Safer to assemble:** ConX Lower and Locking connections and integrated self-aligning stacking/lifting lug improve safety and require fewer workers and fewer man-hours.
- **Faster to erect:** Accelerated schedule (2 – 4X faster) lowers overall risk and brings rapid ROI.
- **Eliminates bracing:** Simplifies pipe layout and routing, and often reduces rack levels required. Also, site maintenance is easier without bracing in the way of access to do repairs.
- **Eliminates field welding:** Bolted bi-axial moment frame structure requires no field welding. Modular attachment points built into beams and columns reduce field rework costs.
- **Fewer man-hours:** Significant reduction in on-site labor required vs. conventionally built structures.
- **Plug & play modules:** Simplify maintenance and allow for configurability and future modifications.
- **Modular, factory fabricated frame assemblies:** Can be stick built or assembled into modules, transported, safely assembled or disassembled and then reconfigured/re-used.

## CONSTRUCTABILITY

The ConX System was conceived with constructability in mind:

- Schedule Acceleration & De-Risking
- Efficient Stick-Built or Modular Construction
- Simplified Logistics
- Minimized Lay Down
- Field Modification/Reconfiguration
- Modular Expandability with Standardized Parts
- Simplified Pipe Installation

# The ConX System for Industrial Applications

A ConX® Modular Chassis is built from standardized components, making it an intuitive system to safely and rapidly assemble in the field or mod-yard.

## MODULAR CHASSIS COMPONENTS

Standard beams, columns and other chassis components.

## MODULAR ASSEMBLY SYSTEM

Components for simple, safe hoisting and assembly.

## MODULAR ACCESS SYSTEM

Components for safe and efficient access with reduced scaffolding.
