KAISER PERMANENTE MARKET STREET HEALTHCARE

PROJECT NARRATIVE

This 57,000 ft² Kaiser Permanente medical office building in Ventura, CA offers a new approach to medical care, allowing members to develop relationships with physicians and staff, and encouraging members and the broader community to integrate health into their everyday lives. It will be LEED Gold certified for energy, lighting, water, and material use efficiencies, incorporating drought tolerant landscaping, solar covered parking, a green roof and water reclamation. It will also achieve Net Zero Energy Certification, ensuring that it generates as much energy as it consumes.

CONX SOLUTIONS

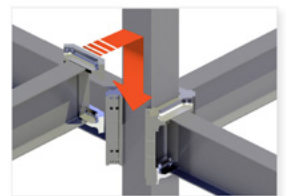

The structural steel was assembled in just six days, and incorporates both the ConXR 200 and ConXL 400 Systems (with ConXR framing a small secondary platform on the side of the building).

Awarded "2018 Best Healthcare Project, Southern California" by ENR California!

KEY PROJECT DATA

57,000 Square Feet	6 Days to Erect Steel
